PERRY'S NOVELTIES AND SPECIALTIES FOR 1942 GARDENS

CLEOME (Spider Flower) GIANT PINK QUEEN

Winner of a Silver Medal, 1942

2226 Pink Queen is a decided improvement over all other varieties of this novel and interesting annual plant. The huge trusses of bright salmon pink blooms change to blush pink and white as they mature, giving a sort of two-toned effect. As the flowers fade others come on, and the seed pods, forming on wiry stems along the stalk, give a curiously fantastic appearance. Averages 3 ft. in height and blooms continuously from midsummer until frost. Ideal for backgrounds and for planting among shrubbery. **Pkt. 25c.**

COSMOS YELLOW FLARE

Silver Medal Award, 1942

2268 A splendid early blooming Cosmos, attaining a height of 3 to 4 ft., bearing quantities of striking golden yellow flowers on long, wiry stems. Ideal for bouquets, flower arrangements and garden decoration. *See colored illustration facing page 17.* **Pkt. 25c.**

MARICOLD, BUTTERBALL

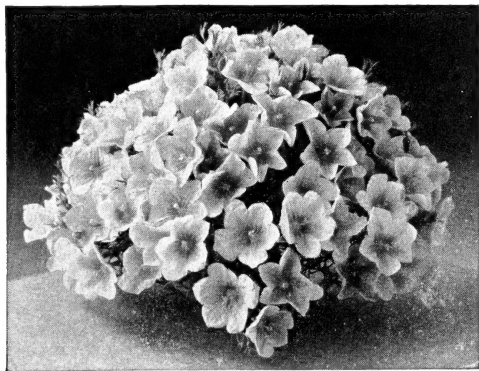

Bronze Medal Award, 1942

4141 Attractive, bushy little plants, 8 in. high, literally covered with small Harmony type flowers of light lemon yellow. Butter-ball blooms throughout the Summer until frost. Without doubt it will be one of the most popular novelties this season. *See colored illustration facing page 17.* **Pkt. 25c.**

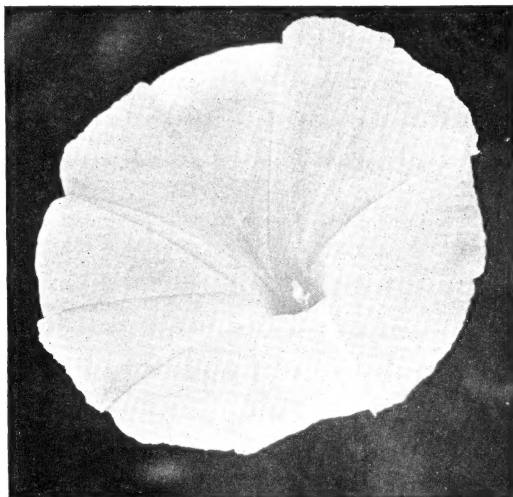

MARIGOLD, GOLDEN BEDDER

Bronze Medal Award, 1942

4090 An extra early variety forming symmetrical mounds covered with golden orange flowers of the Chrysanthemum-flowered type. A row of outer guard petals is surmounted by a fully double crest of tiny, 5-petaled flowers. Long stems give nice flowers for cutting. Grows 18 in. tall. **Pkt. 25c.**

Nierembergia, Purple Robe

Morning Glory, Pearly Gates

MARIGOLD, MELODY

Bronze Medal Award, 1942

4157 The compact plants of this new Marigold are about 12 in. in height, and are covered with brilliant golden orange crested flowers about 1½ in. in diameter. Blooms profusely all Summer and well into the Fall. Very effective when used for edging or massed in beds. **Pkt. 25c.**

MORNING GLORY, PEARLY GATES

Winner of a Silver Medal, 1942

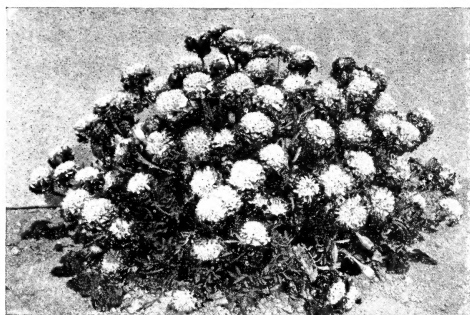

3685 A new Morning Glory of exceptional merit having lovely, lustrous white flowers with a creamy shading deep down in the throat. The vigorous, fast growing vines are covered with a profusion of bloom from the middle of Summer until frost. Pearly Gates is a wonderful companion for Heavenly Blue which it rivals in strength of vine and size of bloom. *See colored illustration facing page 17.* **Pkt. 25c.**

NIEREMBERGIA, PURPLE ROBE

Bronze Medal Award, 1942

4851 A new variety of this popular plant used so much for rockeries and edgings. Purple Robe maintains its deep violet purple color even in full sun during the hot Summer months. Neat, compact plants are uniform in height growing 6 in. tall with a spread of 10 to 12 in. A half hardy perennial, Purple Robe blooms the first year from seed in about 15 weeks. As it is slow in germinating the seed should be started in a flat or prepared seed bed where it can be properly tended during the first 3 week period of germination. *See colored illustration facing page 17.* **Pkt. 35c.**

PERRY'S SHADY SPOT LAWN SEED

A Lawn Sown with Perry's Shady Spot Lawn Seed

There's no better mixture for sowing on the north side of buildings, between houses or under shade trees receiving sunshine less than half the day

Our Shady Spot Lawn Seed is blended from the best grasses possible to obtain for this purpose, only those that grow and flourish under shady conditions in their natural and wild state being used. It is always advisable for those who are seeding down shady places to supply new soil, if possible, especially if large trees are producing the shade, as their roots spread so fast as to quickly exhaust its nourishment. Liberal amounts of fertilizer are as necessary for lawns under shade trees as are plenty of seed and water. Trimming to allow more air and light is frequently helpful.

½ lb. 35c., 1 lb. 60c., 5 lbs. \$2.90, 10 lbs. \$5.50, 25 lbs. (1 bu.) \$12.50, 50 lbs. \$25.00. Ask for prices on larger quantities. Postpaid in New England at above prices when cash accompanies the order, up to and including 20 lbs.

PERRY'S SEASHORE LAWN GRASS MIXTURE

Many a lawn along the New England Shore has been grown from this mixture

A rich, green lawn is especially appreciated and desirable at the seashore, but usually conditions are decidedly unfavorable. Sandy soils are benefited by the addition of clayey soil, peat moss and other organic matter resulting from the use of Wizard Brand Cattle and Sheep Manures. Top soil to the depth of 4 inches should be broadcasted, as grass will not grow well in pure sand. The grasses used in our Seashore Mixture are adapted to unfavorable conditions, will quickly germinate in the top soil and make strong roots which will reach down into the sand for moisture. In order, however, to keep the seaside lawn in good condition it should be watered liberally each evening and also receive an occasional application of our sterilized Sheep Manure to maintain a supply of quickly available plant food. Sow 1 lb. to every 250 square feet.

Lb. 60c., 5 lbs. \$2.75, 10 lbs. \$5.25, 25 lbs. \$12.50

PERRY'S PUTTING GREEN MIXTURE

For an Ideal and Lasting Turf

This is an extra fine lawn grass mixture that will produce at home a turf as fine as on the putting greens of golf clubs. We recommend it highly and suggest when sowing to prepare the soil and fertilize it in the usual way. In order to secure even distribution, divide the seed and broadcast one-half each way of the lawn, allowing 1 lb. to every 150 to 250 square feet.

Lb. 90c., 5 lbs. \$4.40, 10 lbs. \$8.50, 20 lbs. \$16.50, 50 lbs. \$41.00, 100 lbs. \$80.00

PERRY'S BENT GRASS LAWN MIXTURE

For Those Who Appreciate Quality

We offer this mixture blended from a formula employing fine bladed Bent grasses. Sow seed at the rate of 1 lb. to each 250 square feet. Several times during the season broadcast ½ oz. of sulphate of ammonia mixed with six times its bulk of finely sifted soil to each square yard of surface. Lb. \$1.25, 5 lbs. \$5.75, 10 lbs. \$11.00, 20 lbs. \$21.00, 50 lbs. \$50.00, 100 lbs. \$98.00

PERRY'S "NEU LON" MIXTURE

A Mixture without Clover for Sunny Locations

There are customers buying lawn seed mixtures who each year want White Clover omitted for their open sun locations. For these we are pleased to offer "Neu Lon" as a special mixture similar to our famous Franklin Park but without clover. Use the same quantity as recommended for Franklin Park. Lb. 55c., 5 lbs. \$2.65, 10 lbs. \$5.00, 16 lbs. \$7.60, 32 lbs. \$14.75, 100 lbs. \$45.00, prepaid in New England when cash accompanies order

PERRY'S ATHLETIC FIELD MIXTURE

Blended for Severe Conditions

Admirably suited to all kinds of playgrounds that are subject to hard usage. All the grasses selected for this mixture are hardy deep-rooted and wear-resistant. You will appreciate the quality we blend into this mixture, and the excellence of turf obtained on soils well-prepared and properly cared for. Sow 150 lbs. per acre. Lb. 50c., 5 lbs. \$2.40, 10 lbs. \$4.50, 25 lbs. \$10.00, 100 lbs. \$38.00

HINTS ON LAWN PREPARATION AND IMPROVEMENT

Probably we receive more requests each season for help in lawn making and improvement than on any other subject connected with gardening, so we print the following information in hopes that it will answer many of them, though we recognize that practically every lawn presents an individual problem.

Nothing can replace thorough preparation—spading deeply to loosen the soil well—raking to free it from refuse of all kinds and to pulverize it finely—careful grading—enriching sufficiently, and seeding with ample amounts of good seed.

Deep spading improves the mechanical condition of the soil, permitting the tiny roots to penetrate deeply, and secure a maximum of soil food and water. It must be finely pulverized to make a good seed bed. Top soil (preferably a sandy loam) should be spread only on properly prepared sub-soil. Rake well to carefully grade, and always uphill on banks and terraces.

If the soil is known to be sour (acid), apply Land Lime to the rough grade and rake in before spreading either fertilizer or lawn seed. As insurance against the injurious grubs of June bugs and Japanese Beetles, dig in also 8 lbs. of Arsenate of Lead to each 1000 square feet. Broadcast at least 25 lbs. of good plant food like Bonemeal or 5-8-7 to each 1000 square feet, especially under trees.

When sowing your seed, be sure you broadcast it evenly. (A Cyclone Seeder will save seed, time and patience on large areas). Roll, if not sticky, with a water

weight roller to settle the seed uniformly and make the lawn smoother and more presentable. On small spaces simply raking will answer. We advise watering at night or early morning—not when the sun shines. Cut the grass frequently with a sharp lawn mower after it first gets about 3 inches high.

The right kind of a lawn is luxuriant and thick and practically free from weeds. Where do weeds in the lawn come from? Only properly sterilized soil is entirely free from weed seeds. Some may come with top-soil brought in, or from compost not thoroughly rotted, others are carried by the wind and birds, but more are sown each year in impure lawn seed. To secure a maximum of good seed we urge you to buy only Perry's high grade lawn mixtures. But when weeds do appear, dig them out promptly. Scatter in small amounts of additional seed where weeds have been extracted. Always keep a package of Lawn Seed on hand for this purpose.

The first work in the Spring on established lawns is the removal of all litter that has collected during the Winter. With the lawn clean, fill in all hollows with good top soil, and scatter fresh lawn seed and fertilizer as for new lawns. Then while the ground is still soft, roll with a water-weight roller—one that can quickly be made heavy or light, at will, to meet conditions. The earlier this work can be done, the better. A rolled lawn will be smoother and have a neater appearance, though repeated rollings may be injurious.

For additional help we recommend "LAWNS", Charles W. Parker—the best book on the subject—\$1.00 postpaid

The New Hybrid Varieties of Corn Are Rapidly Growing in Favor

For limited garden spaces we recommend dwarf varieties like Golden Bantam Corn

SWEET CORN

Postpaid at pound prices. For larger quantities by Parcel Post, add postage

Culture—Plant about May 15th and in succession every two weeks up to July 14th. Drop six kernels to a hill. Let the hills be 3 feet apart each way for dwarf sorts and slightly more for tall varieties. Sometimes Corn is sown in rows 3 feet apart, allowing 10 inches between the individual plants. Three or more rows should be planted, however, either way in order to secure cross fertilization.

New Hybrid Varieties

The greatest improvement in Sweet Corn in recent years is the development of these hybrids that outyield all others and are also resistant to Stewart's disease. We caution our customers against saving their own seed for planting as Hybrid Corn will not give best results unless carefully crossed each year by experts.

Plant 1 lb. to 200 hills, 12 lbs. per acre. Use 18 lbs. per acre when planted in rows

FOR THE CONTROL OF THE EUROPEAN CORN BORER

We recommend "Black Leaf" Dual-Fixed Nicotine Dust. Apply at full strength using a hand duster. Dust the growing whorls of the main stalks and each tiller, and each of the developing ears when present. These are the points attacked by the young borers, hence require the protection afforded by the Dust. Timing is important—start as soon as the first eggs hatch, and repeat applications at 5-day intervals for about two weeks, or as long as required. Hatching usually starts by the middle of June.

A Rare Treat—Peas Fresh from Your Garden

PEAS

Plant 2 lbs. per 100 feet; about 100 lbs. per acre

Culture—Peas can be planted as early in the Spring as the ground can be worked. Sow in rows about 2 feet or more apart and 1½ to 2 inches deep. Good, rich loam is required for the best success. Apply Land Lime if necessary, as Peas do not thrive on acid soil. Make the first sowing as early as possible and follow up with subsequent plantings to insure a continuous supply throughout the season. For later sowing we recommend the earlier varieties. As Peas are legumes, it is well to inoculate the seed with Legume Aid. Instructions for use with each package.

PERRY'S QUALITY TOMATOES

1 oz. will produce about 3000 plants

Culture—Start seeds indoors to secure the earliest fruits. Plant outside after danger from frost is over, unless you use Hotkaps. Set about 4 feet apart each way in full sun and rich soil. Best commercial growers trellis their plants to hasten maturity, improve quality and reduce disease loss.

SOW WINTER RYE AS A COVER CROP

There are hundreds of gardens that can be benefited by a Fall planting of Winter Rye. Sown at the rate of 5 lbs. to a space 40 by 40, raked in and allowed to grow until April, Winter Rye will produce an abundance of roots and foliage that will not only restore fertility to soils but improve them by adding a lot of desirable humus. It is a logical and sensible thing to do because the cost is slight and the gain great. If for no other reason than to keep down a growth of weeds after your vegetables have been harvested, Fall planting of Rye even as late as November would be a logical procedure.

Rosen Winter Rye. Lb. 15c., 5 lbs. 40c., 14 lbs. 75c., 56 lbs. \$2.50.

INOCULATION FOR LEGUMES

It is a proven, scientific fact that all legumes thrive only when certain bacteria are present in the soil. Some soils may be entirely without them—these Nitrogen-gatherers. Under such conditions one may fail to get a good "catch" from seed planted. Inoculation of seed with bacteria before planting is, therefore, a sound investment and safe insurance. The cost is slight. We sell the jelly form Legume Aid with instructions for use in every package.

PERRY'S PRIZE ASTERS

WILT-RESISTANT STRAINS. Wilt most commonly occurs in the hot Midsummer months just as the buds are beginning to open. The plant wilts, the leaves first turn yellow, then brown and curl, finally dying. The remedy is to use Wilt-resistant Strains that have proven so valuable that wherever available we offer them to the exclusion of others. Plants grown from Wilt-resistant strains are not immune to the disease known as Aster "yellows," which is quite different and is transmitted by insects. However, they are not so susceptible to infection from it as they have a sturdier constitution. Unless otherwise noted, all our seed is of a Wilt-resistant strain.

Early Giant

A new class, unexcelled for long-stemmed cut flowers with superb lasting qualities. The large blooms (4 to 5 inches across) have full centers, broad, graceful petals daintily plumed and intertwined. They flower from early August, continuing until frost. 1½ to 2 feet.

PLANT PERRY'S HARDY LILIES

For a Wealth of Bloom from June to September

GENERAL CULTURE OF HARDY LILIES

No garden is complete without Lilies and suitable varieties may be found for almost any situation. The fullest measure of decorative effect is secured when Lilies are used in combination with other plants and shrubs. Striking effects are produced by planting them among tall-growing perennials, in front of large shrubs, or among dwarf shrubbery, so that the blossoms may rise above its foliage.

Most Lilies will succeed in any light sandy or loamy soil, preferring an acid or a neutral soil. One-third leafmold or decayed peat should be added to the soil. An excellent mixture is one-third loam, one-third leafmold or peat or both, and one-third sand and well rotted cow or sheep manure.

Good drainage is an essential point. The preparation of the soil should be such as to provide ample moisture during the growing period, but without having an excess of water during the dormant period. When planting the bulbs it is well to surround them with sand or fine gravel. This helps to drain away surplus moisture and tends to repel worms.

Occasionally some Lilies do not appear above the ground the first year after planting, but come up strong and vigorous the second season.

In cutting Lilies the lower part of the stem should be left so that the bulb may complete its growth. To cut it to the ground injures and may destroy the bulb. Lilies should be protected from the frost by a light mulch of well rotted manure, a covering of leaves, or granulated peat moss that is now so popular for this work.

On the following pages we offer choice bulbs of several varieties of hardy Lilies. Plant a few varieties and enjoy their beauty.

FOR THE CONTROL OF THRIPS

Before planting we suggest mixing 2½ oz. of Semesan in 1 gal. of water and allow the bulbs to soak in this solution for 7 hours.

When the plants have attained a height of 6 in. the U. S. Dept. of Agriculture recommends weekly spraying with the following mixture. ¼ lb. Tartar Emetic, 1 lb. brown sugar, 6 gal. water.

After the bulbs have been lifted in the fall and the tops cut off, put them in boxes and dust with Naphthalene Flakes, using 1 oz. to 100 bulbs. Cover the boxes with paper and leave them for 4 weeks. Do not use boxes with tight fitting covers as ventilation is important.

At the end of 4 weeks remove the Naphthalene Flakes and store the bulbs as usual.

"Delayed Dormant" "Pink" Spray

"Pre-Pink"—before blossoms show pink, for Scab, Bud Moth and Tent Caterpillar. Dilute Liquid Lime Sulphur 1 to 50, or Dry Lime Sulphur 1 lb. to 12½ gals. with 1 lb. Arsenate of Lead to each 30 gals. of diluted mixture. Kayso, or Hydrated Lime (Sanilime) may wisely be added to avoid a danger of burning.

"Pink"—After blossoms have separated in the cluster, but before they open, for Scab, Red Bug, Aphids, Tent Caterpillar and Leaf Roller. Same as for Pre-pink, with 1 oz. Black Leaf 40 added to each 6 gals. of diluted mixture.

"Calyx"—After 90 per cent of blossoms have fallen. (Never spray while the fruit buds are fully open, for you spoil the set of fruit and may poison bees.) Use same materials

Blake Irrigating Heads or Nozzles. Hose or iron pipe threads. Growers use quantities of these on overhead pipes where it is desirable to deliver a considerable amount of water. Under most pressures, place 45 to 50 ft. apart. $\frac{3}{4}$ in., each 65c., doz. \$7.50. If wanted on a 4-ft. spiked end, green enamel pipe and hose connection, \$2.25.

SOIL-SOAKER

Made of Canvas—Scientifically Treated to Resist Mildew

Soil-Soaker, open only at one end, screws to the end of the water hose, replacing the nozzle or sprinkler. When the water is turned on, Soil-Soaker fills with water—and normal pressure forces water through the pores of the entire surface of Soil-Soaker, uniformly, without spray. Easily moved without shutting off water or getting wet. The soil is soaked deeply and thoroughly, covering an area on all sides of Soil-Soaker. Far more beneficial than light surface-sprinkling. Puts the moisture down into the soil.

DON'T WASTE GARDEN RUBBISH—CONSERVE IT BY USING ADCO

Garden wastes, including leaves and grass clippings are too valuable to burn or otherwise destroy. Convert them easily into rich, organic manure by employing ADCO, a powder which when mixed with vegetable waste and kept moist gradually converts the material into real manure free from weed seeds. The method of using ADCO is simple. Anybody can use it. Spread your farm and garden rubbish (either in a heap on top of the ground, in a large crate, or in a shallow pit) and every time it becomes 6 inches higher, wet it down, sprinkle with ADCO, and tramp or tamp it down. Repeat these steps until all the rubbish is used, and at least once, at the end of a month, turn it over. In three months or so you will be rewarded with a fine lot of rich, clean, organic fertilizer. 7½ lbs. \$1.00; 25 lbs., sufficient to reduce 10 wheelbarrows of material, \$2.25; 150 lbs. \$10.50.

EXCEPTIONAL PERENNIALS AND SHRUBS FOR 1942 GARDENS

ANTHEMIS

Moonlight. Habit compact, upright. Pale lemon yellow daisy-like flowers 2½ in. in diameter. Three \$1.50, doz. \$4.50

ASTER

Beechwood Challenger. The nearest approach to red so far in Hardy Asters. Free flowering, medium height, about 3½ feet. Brilliant crimson-red flowers.

Three \$1.50, doz. \$4.50

Harrington's Pink. The first truly pink Aster. 4 feet. It is excellent for cutting. Three \$1.50, doz. \$4.50

CHRYSANTHEMUM

Clara Curtis. The single salmon-pink daisy-like flowers are about three inches in diameter and are at their best in August and early September. Hardy and blooms so early that the flowers are never damaged by frost. Three \$1.40, doz. \$4.00

DWARF CHRYSANTHEMUM

Little Bob. Improved Cushion Mum. A charming low-growing garden Chrysanthemum from England which will surely be grown by everyone interested in Mums. The plant spreads to about 24 inches in diameter and develops into a perfectly symmetrical mound. In early Autumn hundreds of small mahogany bronze double button-like flowers appear on short stiff wire-like stems. When in bloom the plant is completely covered with flowers. In appearance, far superior to the well-known Cushion Mums. We are sure you will like this new introduction. Three \$1.75, doz. \$6.50

HARDY FUCHSIAS

Magellania. This most interesting shrub came to us from the New York Botanical Garden, where it has proven entirely hardy. It is in bloom all Summer long until stopped by frost. The ruby-red, pendant flowers are produced by the hundreds, flowering just as freely in full sun as in light shade. A most interesting plant for the flower border or rock garden, where it fits in perfectly, blooming all Summer. Like all Fuchsias, they are especially adapted for shady locations. We advise protection anywhere north of Philadelphia. Three \$1.10, doz. \$3.30

Magellania Alba. The pure white form of the above. It is exactly the same in habit of growth except the flowers are white. It is hardier than the red flowered variety. Three \$1.50, doz. \$4.50

Riccantoni, Scarlet Beauty. Lovely pendant crimson-red and purple flowers. A hybrid of unknown origin. It is used as a boundary hedge in many places in the south and west of England and Ireland where moisture, fog and a mild cool climate bring it to perfection. Here in Massachusetts it requires shade, the same as Magellania and freezes down to ground level as do the Butterfly Bush. Three \$1.40, doz. \$4.00

HEMEROCALLIS

Hyperion. The flowers are a fine citron yellow produced in great numbers on stout stems about 40 inches tall. Most delightful fragrance. Perfectly hardy anywhere. Blooms throughout July and early August. Three \$2.70, doz. \$7.50

ORIENTAL POPPY

Snowflake (Patent No. 365). "A sensational break in Poppies" is what an expert said when he saw Snowflake in bloom the first time in our nursery. The lower half of the flower is pure white, the upper half a flame orange, creating a most unusual and brilliant effect. The orange band of the upper half of the petals varies considerably in width with each flower. Three \$2.00, doz. \$7.50

PENTSTEMON

Garnet. This is the first of a new strain of hardy, large-flowered Pentstemons. Garnet is of spreading habit and produces a succession of bloom from June until stopped by frost. Three \$1.50, doz. \$4.50

PHLOX

Augusta (Patent No. 252). A strong growing plant of medium height, about 2½ feet when fully grown, with rich bronzy foliage and stem. Color is best described as a brilliant cherry-red. Three \$1.50, doz. \$4.50

Columbia (Patent No. 118). The color suggests a delicate, yet brilliant shrimp pink, with faint shading at center. The color effect created by a well-grown plant is exquisite and never before seen in Phlox. Three \$1.10, doz. \$3.30

Mary Louise. Pure, glistening, snow-white heads of unusually large size, the individual flowers are twice as large as in other white phlox. A perfectly beautiful variety, unquestionably the best white to date. It is a good grower with clean foliage. Of medium height. Three \$1.10, doz. \$3.30

PYRETHRUM

(Colored *Marquette* or *Painted Daisy*)

Showy, brightly colored flowers produced during May and June which are of great value for cutting. They prefer a sunny location and do best in soil enriched with well rotted manure.

Buckeye. Double red. A fine variety. Three \$1.50, doz. \$5.00

Tojan. Semi-double dark pink. Unusual and very lovely. Three \$1.50, doz. \$5.00

Victory. Double pure white flowers freely produced on tall, stiff stems. Three \$1.50, doz. \$5.00

DOUBLE SHASTA DAISY

Esther Reed. The pure white flowers are completely double produced freely from June to October. They are of excellent lasting quality. The stems are about 18 inches high, very still, holding the heavy double pure white flowers upright. Excellent for the border as well as for cutting. Three \$1.75, doz. \$6.50

FRILLED SHASTA DAISY

Phyllis Elliott. A large daintily frilled Shasta Daisy which grows about 2 feet tall. The flowers are formed by a triple row of narrow frilled petals, flared and laciniated at the tip, and are about 3½ inches across. Excellent for the hardy border and makes a dainty cut flower. This English variety we think better than "Chiffon", giving more flowers with longer stems. Three \$1.75, doz. \$6.00

GIANT STOKESIA

Blue Moon. Stokesia Blue Moon is a vigorous growing, large and free flowering variety of exceptional merit and distinction. It is perfectly hardy anywhere and has no insects bothering it. It is of easy culture, and flowers throughout the Summer and Autumn until stopped by hard frosts. Flowers five to six inches in diameter. Stems are 12 to 18 inches long, bringing the large, vividly blue disc-like flowers well up and above the plant. Three \$1.50, doz. \$4.50

DOUBLE RUSSIAN VIOLETS

This highly scented Violet has been difficult to obtain for many years. It is very much sought after by those who know it and want it for the exquisite fragrance of its double flowers. It is slow of growth, does not spread much, and is very happy in shady cool places. Nothing sweeter could be growing in your cold frame. It is Winter-hardy. Three \$1.40, doz. \$4.00

VIOLA ODORATA

"Perpetual Flowering." Unlike other sweet scented Violets "Perpetual Flowering" blooms not only in Spring but throughout the Summer and Autumn. The flowers are not large but can be picked any time of the year. The fragrance of the flowers leaves nothing to be desired. The plants grow well without any unusual care or attention and are perfectly hardy not objecting to temperatures many degrees below zero. Three \$1.50, doz. \$4.50

HARDY VIOLA

Maggie Mott. A splendid hardy pale blue Viola for the garden as well as for the cool greenhouse for Winter blooming. The flowers are large and grown on long stiff stems which places them well above the foliage. Two-year-old clumps are 18 to 24 inches in diameter, remain nicely compact, produce hundreds of flowers throughout the entire Spring, Summer and Fall. Viola Maggie Mott is as hardy as Viola Jersey Gem, blooms more freely, and the flowers are about twice as large and a lovely light blue. Does well in light shade and is a charming subject for the rock garden as well. Three \$1.50, doz. \$4.50

TREE WISTERIA

No more lovely sight can be imagined than a Tree Wisteria in bloom. The purplish blue flowers are produced by the hundreds and completely cover the tree during May, transforming it into a thing of sheer beauty. In formal gardens Tree Wisterias are indispensable. On the lawn they develop into beautiful specimens and live for generations, increasing in beauty and dignity each successive season. The plants we offer are grown on stems about 4 feet high and the crowns are about 2½ to 3 feet in diameter. Every plant has bloomed before it leaves the nursery.

Blue Tree Wisteria. The most popular color. Each \$6.00

White Tree Wisteria. The white-flowered form of the above. Delicate silvery white blooms. Each \$7.00
